

CORPORATE GIVERNANCE

AURA.CO.TH

1. Overview

Corporate governance provides the principles and structures through which an organisation is directed, supervised and held accountable. It establishes the framework for responsible decision-making, appropriate oversight and the protection of long-term organisational interests.

For an investment company, governance extends beyond its own internal operations. It also encompasses the way investments are evaluated, ownership responsibilities are exercised and the performance and conduct of investee businesses are considered.

At Aura, corporate governance and investment oversight form an important part of the company's approach to responsible ownership and long-term capital stewardship.

As a privately owned, family-controlled international investment company, Aura approaches governance in the context of its ownership structure and its responsibility for its own family-owned capital.

The company recognises that sound governance can contribute to financial discipline, organisational accountability, risk awareness and the long-term sustainability of investment activities.

Aura may consider governance principles across its own investment decision-making processes and, where relevant, the businesses and assets in which it invests.

The objective is to support informed decisions, responsible ownership, appropriate oversight and the protection of long-term economic interests.

2. Aura's Corporate Governance Philosophy

Aura's governance philosophy is based on responsible ownership, integrity, accountability and disciplined decision-making.

Effective governance should provide clarity regarding responsibilities, decision-making authority and the oversight of material financial and operational matters.

The company's approach may be guided by the following principles:

- Responsible stewardship of family-owned capital.
- Clear ownership and accountability.
- Informed and independent decision-making.
- Appropriate internal controls.
- Financial and operational oversight.
- Responsible management of conflicts of interest.
- Compliance with applicable laws and regulations.
- Accurate and reliable information.
- Long-term organisational sustainability.
- Periodic review of governance arrangements.

Governance is not viewed merely as an administrative requirement. It is an important part of the framework through which investment decisions are considered and ownership responsibilities are exercised.

3. Governance Within a Family-Owned Investment Company

Family ownership can create a distinctive long-term investment perspective.

Unlike structures primarily focused on external investors or third-party capital mandates, Aura's investment activities are undertaken in relation to its own family-owned capital.

This ownership context places particular importance on responsible financial stewardship, continuity, appropriate oversight and the preservation of long-term economic interests.

Governance arrangements may therefore consider:

- The relationship between ownership and management.
- Investment decision-making responsibilities.
- Capital allocation authority.
- Financial oversight.
- Risk management.
- Succession and continuity considerations.
- Confidentiality and information management.
- Documentation of important decisions.

The specific governance structure should reflect the company's scale, activities, legal obligations and ownership arrangements.

Family ownership does not remove the need for professional standards, disciplined processes or accountability.

4. Ownership, Leadership and Accountability

Clear accountability is essential to effective corporate governance.

An organisation should establish an appropriate understanding of who is responsible for strategic direction, investment decisions, financial management and oversight.

Aura may consider governance arrangements that distinguish between:

- Ownership responsibilities.
- Strategic leadership.
- Investment evaluation.
- Financial oversight.
- Risk management.

- Operational responsibilities.
- Legal and regulatory matters.
- Administrative and reporting functions.

The precise allocation of responsibilities may depend on the nature and complexity of the company's activities.

Clarity in these areas can help reduce ambiguity, support consistent decisions and ensure that important matters receive appropriate attention.

5. Strategic Direction and Investment Principles

Corporate governance provides a framework for maintaining consistency between an organisation's long-term direction and its day-to-day decisions.

Aura may establish investment principles that guide the evaluation of opportunities and the deployment of family-owned capital.

These principles may address:

- Long-term investment objectives.
- Capital allocation priorities.

- Investment risk considerations.
- Geographic and sector exposure.
- Financial flexibility.
- Ownership expectations.
- Governance standards.
- Investment review procedures.

Strategic direction should provide a clear framework without preventing appropriate flexibility when economic conditions or investment opportunities change.

6. Investment Decision-Making Governance

Investment decisions can involve substantial financial commitments and long-term consequences.

A structured governance approach may help ensure that investment proposals receive appropriate analysis and review before capital is committed.

Aura may consider an investment decision process involving:

1. Identification of an investment opportunity.
2. Preliminary strategic assessment.
3. Financial and commercial research.
4. Valuation analysis.
5. Due diligence.
6. Risk assessment.
7. Capital allocation review.
8. Appropriate internal consideration and approval.
9. Documentation of the decision.
10. Ongoing investment oversight.

The depth of review may vary according to investment size, complexity, ownership structure and potential risk.

The objective is to ensure that investment decisions are based on relevant information and a clear understanding of their financial and commercial implications.

7. Investment Approval and Delegated Authority

Effective governance requires clarity regarding who may evaluate, recommend, approve and implement investment decisions.

Aura may consider appropriate approval arrangements based on the nature and scale of each commitment.

Such arrangements may distinguish between:

- Preliminary investment screening.
- Research and analytical responsibilities.
- Financial assessment.
- Risk review.
- Investment recommendations.
- Final approval authority.
- Transaction execution.
- Post-investment oversight.

Material investment commitments may warrant a more comprehensive review than routine administrative or operational decisions.

Clear approval responsibilities can help strengthen accountability and reduce the possibility of unauthorised commitments.

8. Investment Committees and Advisory Structures

Depending on its requirements, an investment organisation may use formal committees or advisory arrangements to support investment review and oversight.

Aura may consider such structures where they are appropriate to the scale and complexity of its investment activities.

Potential responsibilities may include:

- Reviewing investment proposals.
- Examining financial assumptions.
- Considering valuation.
- Assessing material risks.
- Reviewing capital allocation.
- Evaluating investment performance.

- Considering significant changes in investment conditions.

An advisory structure may provide specialised knowledge or independent perspectives without necessarily holding final investment approval authority.

The existence, composition and responsibilities of any such structure should be defined according to the company's actual governance arrangements.

9. Financial Governance and Control

Financial governance supports the responsible management of an organisation's financial resources.

It involves appropriate oversight of financial information, capital commitments, cash flows, liabilities and investment-related transactions.

Aura may consider financial controls covering:

- Investment funding.
- Cash management.
- Financial reporting.
- Transaction authorisation.

- Capital expenditure.
- Borrowing arrangements.
- Payment controls.
- Financial reconciliations.
- Recordkeeping.
- Financial obligations.

Reliable financial information is important for assessing investment performance and understanding the company's financial position.

Appropriate controls may also help identify errors, irregularities and weaknesses in financial processes.

10. Internal Controls and Procedures

Internal controls are designed to support reliable operations, reduce preventable errors and protect organisational resources.

Aura may consider internal procedures appropriate to its activities and risk exposure.

These may address:

- Authorisation of transactions.
- Access to financial information.
- Separation of responsibilities where appropriate.
- Documentation requirements.
- Verification of payments.
- Contract management.
- Data protection.
- Financial recordkeeping.
- Reporting procedures.
- Review of unusual transactions.

Controls should be proportionate to the organisation's size and complexity.

They should also be reviewed periodically to ensure that they remain relevant as activities and operating requirements evolve.

11. Risk Governance and Oversight

Risk governance establishes how material risks are identified, evaluated, communicated and addressed.

Aura's investment risk considerations may include financial, market, credit, liquidity, operational, legal, regulatory, geopolitical, technological and reputational exposures.

Governance arrangements may support:

- Clear responsibility for risk assessment.
- Review of material investment exposures.
- Monitoring of significant developments.
- Escalation of important concerns.
- Documentation of risk decisions.
- Periodic reassessment of investment assumptions.

Risk oversight should be connected to capital allocation and investment strategy.

This helps ensure that investment opportunities are considered not only in terms of potential financial benefits but also in relation to their possible vulnerabilities.

12. Compliance and Regulatory Responsibility

Compliance with applicable laws and regulations is an important component of responsible corporate governance.

The requirements relevant to an investment may depend on its legal structure, jurisdiction, sector, ownership arrangements and transaction characteristics.

Aura may consider compliance matters relating to:

- Corporate law.
- Investment ownership.
- Tax obligations.
- Financial reporting.
- Contractual requirements.
- Employment law.
- Data protection.
- Environmental regulation.
- Licensing requirements.

- Cross-border transactions.
- Sanctions and applicable restrictions.

The company may consider specialist legal, tax and regulatory advice where appropriate.

Compliance responsibilities should be assessed according to the relevant legal requirements rather than assumed to be identical across all jurisdictions.

13. Ethical Conduct and Business Integrity

Ethical conduct is an important foundation of responsible ownership and corporate governance.

Investment decisions may have consequences for employees, business partners, customers, communities and other stakeholders.

Aura may consider the conduct and integrity of businesses in which it evaluates investment opportunities.

Relevant considerations may include:

- Honest business practices.
- Fair dealing.

- Responsible leadership.
- Anti-bribery and anti-corruption measures.
- Respect for applicable laws.
- Appropriate treatment of employees.
- Responsible supplier relationships.
- Accurate business records.
- Protection of confidential information.

Ethical considerations should form part of the broader assessment of a business's sustainability and governance quality.

14. Conflicts of Interest

Conflicts of interest may arise when personal, financial, professional or commercial interests could influence a decision or create the appearance of compromised judgement.

Such situations require appropriate recognition and management.

Aura may consider procedures addressing:

- Identification of potential conflicts.
- Disclosure of relevant interests.
- Review of related-party arrangements.
- Appropriate restrictions on participation in decisions.
- Documentation of material conflicts.
- Independent assessment where necessary.

The specific response should depend on the nature of the conflict and the applicable legal and governance requirements.

Effective conflict management supports confidence in the integrity of investment decisions.

15. Related-Party Transactions

Transactions involving related parties may require additional attention because the parties may have existing ownership, family, management or commercial relationships.

Aura may evaluate related-party transactions according to:

- Commercial purpose.
- Economic rationale.

- Pricing and valuation.
- Contractual terms.
- Financial implications.
- Applicable legal requirements.
- Potential conflicts of interest.
- Appropriate approval procedures.

The objective is to ensure that relevant transactions are considered fairly, transparently and in accordance with applicable requirements.

16. Corporate Governance in Investee Companies

Where Aura holds an ownership interest in a business, the governance arrangements of that business may be relevant to its investment assessment and ongoing ownership considerations.

Strong governance can contribute to better oversight, more reliable decision-making and a clearer understanding of business responsibilities.

Aura may evaluate:

- Board structure and effectiveness.
- Management accountability.
- Financial reporting quality.
- Internal control systems.
- Shareholder rights.
- Ownership transparency.
- Related-party transactions.
- Risk oversight.
- Succession planning.
- Regulatory compliance.

The degree of governance influence available to an investor depends on its ownership position, contractual rights and applicable legal framework.

17. Board Oversight and Management Accountability

The board of an investee company may play an important role in supervising management, setting strategic direction

and protecting the interests of the company and its shareholders.

Aura may consider board effectiveness when evaluating an investment.

Relevant factors may include:

- Appropriate experience and expertise.
- Independence of judgement.
- Clarity of responsibilities.
- Quality of financial information.
- Oversight of management.
- Risk awareness.
- Strategic review.
- Accountability for performance.

A capable board can contribute to stronger organisational discipline and more effective long-term management.

However, governance structures must be assessed in their specific legal and commercial context.

18. Shareholder Rights and Ownership Responsibilities

Ownership involves both economic rights and responsibilities.

Depending on the investment structure, shareholders may have rights relating to voting, information, distributions, board representation and significant corporate decisions.

Aura may consider ownership rights and responsibilities before committing capital to a business.

Relevant matters may include:

- Voting rights.
- Board appointment rights.
- Information rights.
- Dividend policies.
- Capital raising provisions.
- Transfer restrictions.
- Reserved matters.

- Minority protections.
- Exit rights.
- Shareholder agreements.

Understanding these rights is important because the legal structure of an investment can influence the investor's ability to exercise oversight and protect its economic interests.

19. Minority and Controlling Investments

The governance considerations of a minority investment may differ from those of a controlling investment.

A minority investor may have limited influence over daily operations and strategic decisions, depending on its contractual and statutory rights.

A controlling investor may have greater responsibilities and influence over governance, management appointments and major corporate decisions.

Aura may evaluate governance according to the ownership position and rights associated with each investment.

For minority investments, particular attention may be given to information access, shareholder protections and reserved matters.

For controlling investments, additional considerations may include management oversight, board composition, internal controls and the responsibilities associated with active ownership.

20. Investment Monitoring and Oversight

Governance responsibilities do not end when an investment is completed.

Ongoing oversight may help determine whether an investment continues to perform in accordance with its original assumptions and whether material developments require further attention.

Aura may monitor:

- Financial performance.
- Cash-flow generation.
- Capital expenditure.

- Debt and financing.
- Management effectiveness.
- Operational developments.
- Governance matters.
- Regulatory changes.
- Market conditions.
- Material business risks.

The level of oversight may vary according to the investment's size, complexity, ownership position and risk profile.

The objective is to maintain an informed understanding of the investment throughout the ownership period.

21. Performance Evaluation and Accountability

Investment performance should be considered in relation to the original investment rationale and the broader economic environment.

Aura may review whether an investment is progressing in accordance with its financial and strategic assumptions.

Performance assessment may consider:

- Revenue development.
- Profitability.
- Cash flow.
- Return on invested capital.
- Capital expenditure.
- Financial leverage.
- Market position.
- Operational efficiency.
- Governance quality.
- Changes in risk exposure.

Performance evaluation should also consider whether differences between expected and actual results arise from market conditions, business execution or assumptions that require reassessment.

Accountability involves understanding both the outcomes achieved and the decisions that contributed to them.

22. Financial Reporting and Information Quality

Reliable financial information is essential to sound governance.

Financial reporting helps owners and decision-makers understand an organisation's financial condition, operating performance and material obligations.

Aura may consider the quality of financial reporting within its own activities and when evaluating investee businesses.

Relevant factors may include:

- Accuracy of financial statements.
- Consistency of accounting policies.
- Quality of supporting documentation.
- Timeliness of reporting.
- Disclosure of material liabilities.
- Cash-flow reporting.

- Debt and financing information.
- Audit arrangements where applicable.

The quality of information should be considered when assessing the reliability of financial analysis and investment valuations.

23. Audit and Independent Review

Independent audit and review arrangements may contribute to financial accountability and confidence in reported information.

Depending on applicable requirements and the nature of an investment, Aura may consider:

- External financial audits.
- Internal audit functions.
- Independent valuations.
- Compliance reviews.
- Operational assessments.
- Specialised technical reviews.

The purpose of independent review is to provide additional scrutiny and identify matters that may require attention.

The appropriate scope and frequency should reflect the organisation's size, legal obligations and risk exposure.

24. Transparency and Confidentiality

Good governance requires appropriate transparency while protecting commercially sensitive and confidential information.

Aura recognises that investment activities may involve financial information, transaction discussions, ownership structures and strategic decisions that require confidentiality.

The company may consider information-management principles that address:

- Accurate internal reporting.
- Appropriate disclosure.
- Confidentiality obligations.
- Information access.
- Data security.

- Document retention.
- Legal disclosure requirements.
- Protection of commercially sensitive material.

Transparency should be consistent with applicable law, contractual obligations and legitimate confidentiality requirements.

25. Governance Across Different Investment Categories

Governance considerations vary according to the nature of an investment.

Public equities: Corporate disclosures, shareholder rights, board oversight and financial reporting may be important considerations.

Private equity: Ownership agreements, management accountability, board representation and exit provisions may require particular attention.

Private credit: Borrower reporting, contractual protections, covenants and repayment oversight may be relevant.

Real estate: Property ownership, asset management, contractual arrangements, regulatory compliance and financial reporting may be considered.

Infrastructure: Long-term operating responsibilities, concession agreements, maintenance obligations and regulatory oversight may be important.

Technology: Intellectual property, cybersecurity, data governance and management accountability may be relevant.

Energy and natural resources: Environmental compliance, operational safety, licensing and asset-management responsibilities may warrant particular attention.

The governance assessment should reflect the legal and commercial characteristics of each investment.

26. Governance in Joint Ventures and Partnerships

Joint ventures and strategic partnerships may involve shared ownership, financial commitments and decision-making responsibilities.

Such structures require clarity regarding the rights and obligations of the participating parties.

Aura may evaluate:

- Ownership percentages.
- Governance arrangements.
- Board representation.
- Voting rights.
- Reserved matters.
- Capital contribution obligations.
- Profit distribution.
- Information rights.
- Dispute resolution.
- Exit provisions.

Clear contractual and governance arrangements can help reduce ambiguity and support effective cooperation.

The rights and responsibilities of each participant should be understood before entering into a partnership.

27. Corporate Culture and Leadership Standards

Corporate culture can influence the way an organisation makes decisions, manages employees and responds to challenges.

A business may have formal governance documents but still face weaknesses if its leadership culture does not support accountability and responsible conduct.

Aura may consider:

- Leadership integrity.
- Management behaviour.
- Employee accountability.
- Communication standards.
- Decision-making discipline.
- Treatment of stakeholders.
- Compliance culture.
- Responsiveness to problems.

Culture is not always easy to measure, but it may provide important information about the quality and sustainability of an organisation.

28. Succession Planning and Continuity

Leadership continuity can be important to the long-term stability of a family-owned investment company and its investee businesses.

The loss or replacement of key individuals may affect strategic direction, business relationships and operational performance.

Aura may consider succession and continuity matters in relation to:

- Ownership responsibilities.
- Leadership roles.
- Key management positions.
- Business-critical expertise.
- Institutional knowledge.
- Investment oversight.

- Long-term strategic planning.

Succession planning should be appropriate to the company's actual ownership and governance structure.

The objective is to support continuity while ensuring that leadership and decision-making remain aligned with the organisation's long-term responsibilities.

29. Technology, Data and Governance

Technology and data systems increasingly influence corporate governance and investment oversight.

Accurate information, appropriate access controls and reliable reporting systems can support better-informed decisions.

Aura may consider governance-related technology capabilities such as:

- Financial reporting systems.
- Document management.
- Investment records.
- Approval workflows.
- Access controls.

- Data protection.
- Cybersecurity monitoring.
- Compliance tracking.
- Risk reporting.
- Performance dashboards.

Technology can improve the organisation and accessibility of information, but systems must be appropriately managed and protected.

Responsibility for governance remains with the relevant decision-makers rather than the technology itself.

30. Governance and International Investment Activities

International investment activities may involve different legal systems, regulatory requirements, business practices and governance standards.

Aura may consider jurisdiction-specific governance matters when evaluating overseas investments or cross-border transactions.

These may include:

- Corporate ownership regulations.
- Foreign investment restrictions.
- Local governance requirements.
- Tax obligations.
- Financial reporting standards.
- Contractual enforceability.
- Data protection.
- Anti-corruption requirements.
- Sanctions and applicable restrictions.
- Local licensing obligations.

Governance arrangements should be evaluated according to the relevant jurisdiction rather than assuming that a single approach will apply everywhere.

31. Responsible Ownership and Long-Term Value

Responsible ownership involves understanding the obligations associated with holding an investment and

considering how governance quality may influence its long-term economic prospects.

Aura may evaluate whether an investee business has appropriate systems to support:

- Financial discipline.
- Operational resilience.
- Management accountability.
- Legal compliance.
- Responsible leadership.
- Long-term strategic planning.
- Effective risk oversight.
- Sustainable business development.

Responsible ownership does not require an investor to manage every operational decision directly.

The appropriate level of involvement depends on the ownership position, contractual rights and nature of the investment.

32. Continuous Governance Improvement

Governance arrangements should evolve as organisations, investment activities and regulatory environments change.

Aura may periodically consider whether its governance principles and oversight procedures remain appropriate.

Continuous improvement may involve:

- Reviewing decision-making procedures.
- Clarifying responsibilities.
- Strengthening internal controls.
- Improving financial reporting.
- Updating risk oversight.
- Reviewing conflicts-of-interest procedures.
- Enhancing information management.
- Considering changes in applicable regulation.
- Incorporating lessons from investment experience.

The objective is to maintain governance arrangements that remain relevant, proportionate and effective.

33. Conclusion

Corporate governance and investment oversight provide the framework through which an investment company supports responsible decision-making, accountability and long-term ownership.

At Aura, governance is considered an important part of managing its own family-owned capital and evaluating the businesses and assets in which it may invest.

As a privately owned, family-controlled international investment company, Aura recognises the importance of clear responsibilities, disciplined financial oversight, appropriate controls and informed investment review.

The company's approach places emphasis on integrity, accountability, responsible ownership and the careful consideration of material financial and operational matters.

Through appropriate governance principles and ongoing investment oversight, Aura seeks to support sound decision-making, responsible capital stewardship and the long-term preservation and development of family-owned capital.
